

# Human-alloprimate coexistence? Current debates and considerations

Dr Nicholas Malone,  
University of Auckland

Friday 20 September, 1-2pm AEST

Facilitating co-existence, defined here as sustainable sympatry, between humans and alloprimates requires careful thought and attention to an array of realities - from the material/ecological to the social/perceptual. Anthropology, sometimes seen to be at the nexus for tensions between interpretive and explanatory approaches, has much to offer contemporary primatological practice; and perhaps vice versa. Drawing upon experiences in primate research and conservation, this talk aims to re-conceptualise the human-ape interface, including the role of primatologists, in a time of increasing ecological precarity.

**Dr Nicholas Malone** is an anthropologist with a broad interest in the social and ecological lives of primates, especially those of apes and humans.

**Location**  
Room 2175, Haydon Allen Building
